## High Speed Internet Solutions

### COMPLETE INTERNET BUSINESS STRATEGY

*Connecting with NetAccess is much more than connecting to the Internet; it's connecting with wisdom and experience. Currently over 600 area businesses are using NetAccess.*

### DESIGNED TO FIT YOUR NEEDS

*NetAccess delivers a range of business solutions in the rapidly developing Internet environment. From ADSL to fibre and our high speed wireless infrastructure, our NetConnect services gives you the most in fast, high quality, and reliable internet access.*

### LEADING EDGE TECHNOLOGY

*We are constantly investing in technology to give you the performance that you demand. From 1.5 Mbps to 300 Mbps, we have a scalable solution to suite your requirements.*

**Are you getting the most out of your internet service? Call NetAccess for an evaluation.**

NetAccess, a leader since 1993, is one of Canada's first Internet Service Providers. Locally owned and managed, NetAccess brings together a wide range of business and Internet experience to provide clients with the right solution for their Internet requirements.

### ADSL NetConnect

The NetAccess DSL solutions offer a range of options built on a solid reputation of proven performance, high stability, and reliability. High speed data is transferred over existing copper telephone lines. The service allows for Internet and voice communications on the same line at the same time so no extra phone line is required. ADSL connection speeds range from 1 to 6 Mbps and no additional data transfer charges apply.

### Gateway Access Service

NetAccess offers a Gateway Access Service (GAS) for SOHO and small business applications. GAS offers customers a more consistent performing high speed DSL access service, a scalable and key building block for their Internet connectivity or network infrastructure. Enjoy a higher level of comfort and security with a GAS DSL connection.

### High Speed Access

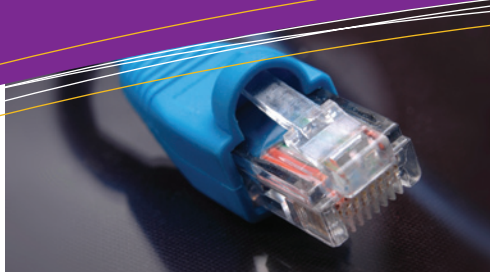

NetAccess also offers a High Speed Access (HSA) DSL service. HSA provides the extra power needed for more enterprise solutions offering businesses a key building block for network infrastructure. Combined with LAN or ATM connectivity, HSA service completes an effective end to end business Internet solution. A direct connection means better speeds and reliability. With HSA DSL, the connection is always on with no PPPoE authentication required. Eliminating the PPPoE authentication removes overhead and increases speed.

### Fibre NetConnect

Fibre NetConnect provides you with a complete range of scalable dedicated fibre based solutions that can grow with your expanding business needs. Whether it is a simple network connection for any size business, a sophisticated VPN setup, or providing a high speed connection between offices, Fibre NetConnect will give you the utmost in reliability and performance to run your business on the Internet with complete confidence.

### Wireless NetConnect

NetAccess uses Motorola's broadband wireless technologies to deliver high speed symmetrical internet connections to businesses. The wireless network is designed to deliver superior performance and reliability. From speeds of 1.5Mbps to 300Mbps we have a connection package to suit your needs at a price more affordable than traditional wired service such as fibre or T1. Customers also use a NetConnect Wireless option as a redundant connection for existing wired connections.

# NetConnect

## Package Features

### SOHO NetConnect

Internet connection suited to residential or home based business needing a robust and reliable connection.

### BUSINESS NetConnect

An economic solution for a small to medium sized company with basic email and internet connectivity requirements. 6Mbps of speed provides plenty of bandwidth for most applications.

### CORPORATE NetConnect

A 6 Mbps dedicated corporate point-to-point connection that provides a continuous, always on connection to the internet. This service offers a robust and non shared connection.

### WIRELESS NetConnect

For businesses that can connect to one of our POP locations and require a high speed symmetrical connection. Ideal for high bandwidth applications such as voice and video.

### FIBRE NetConnect

For larger organizations with large bandwidth requirements providing a minimum throughput of 10Mbps.
