

Wireless NetConnect

Carrier Grade Toughness with High Performance,
Security, Ease of use and Scalability

SUPERIOR DESIGN

Our wireless network is designed to deliver superior performance and reliability. From speeds of 1.5Mbps to 300Mbps we have a connection package to suit your needs at a price more affordable than a traditional wired service such as fibre or T1.

MORE BANDWIDTH

Customers requiring a better upload for company servers, video surveillance applications and voice services, will enjoy the bandwidth available using NetConnect Wireless options. T1 and Fibre like speeds are available at a much lower cost.

POINT-TO-POINT SOLUTIONS

Extend your LAN across the street or to another city using our PTP wireless solution. Motorola Canopy © backhaul application is a powerful dedicated data link for enterprise environments of all kinds to extend their Network using 1.5 Mbps to 300 Mbps speeds and the same security and data encryption used with the PMP equipment.

WiFi APPLICATIONS

NetConnect suite of wireless products also includes local area Wi-Fi or hot spot applications for your business using the latest technology provided by Motorola and Colubris Networks, both leaders in the industry.

NetAccess uses Motorola's broadband wireless technologies to deliver high speed symmetrical internet connections to businesses using Point-to-Point and Point-to-Multipoint solutions.

Advanced Applications

Our wireless broadband platform and Point-to-Point (PTP) solutions allows businesses to take advantage of today's most advanced applications such as broadband access, video surveillance, Voice-Over-IP, LAN connectivity and more.

User Satisfaction and Performance

In the demanding broadband marketplace, the Motorola Canopy © platform offers state-of-the-art wireless technology with significant benefits that enhance broadband experience. The system's performance makes high demand technologies like voice over IP, video services, security surveillance, E1/T1 extension, and broadband Internet access both efficient and cost effective.

Higher Quality of Service

The Canopy proven technology means that no matter where you are located your service is always available. And because we provide upgradable software, you have no fear of your system becoming obsolete. We also provide timely troubleshooting and support services.

Interference Resistance

The Canopy solution's unique and powerful modulation scheme significantly improves the quality of data delivery and effectively mitigates interference from other systems. The platform's wireless signals are highly effective in penetrating obstacles and avoiding obstructions, making it as efficient in dense urban environments as it is in suburban areas and rural locations.

Data Rates

The Canopy system provides symmetrical upload and download speeds as fast or faster than virtually every other service available today. The point-to-multipoint system offers up to 14 Mbps (aggregate data rates) and the point-to-point system delivers up to 300 Mbps (aggregate data rates) to network end users.

Security

The Canopy system enhances security with over the air DES (Data Encryption Standard) encryption as well as AES (Advanced Encryption Standard) that provides 128-bit encryption to ensure secure data delivery and exceptional reliability.

Reduced Cost

Our wireless technology can provide substantial cost benefits when compared to traditional office options such as cable, DSL, T1, and fiber connections.

Quick Installation

Unlike other options that can take weeks or months to deploy, we can have your wireless broadband up and running quickly as our onsite units are small, unobtrusive and maintenance free. Deployment is usually a matter of days provided there is line of site to one of our tower facilities in the Hamilton, Burlington, Oakville and St Catharines areas.

Wireless NetConnect

Superior Performance that Delivers Enhanced
Network Productivity and User Satisfaction

MOTOROLA CANOPY® PLATFORM

This is a much different technology from Wi-Fi or cellular as it uses a directional narrow beam, point to point antennas, and radios that guarantee network access only to the specific customers. In order to operate, these radios must be pointed at each other with a clear and unobstructed line-of-sight.

SECURITY

Motorola Canopy® is designed to maintain security and optimize performance and reliability by using a proprietary over the air protocol which is fully encrypted using EAS standards.

HIGH PERFORMANCE

Our network architecture is designed and engineered for high performance using a combination of Point-to-Point (PTP) and Point-to-Multipoint (PMP) configurations supporting a wide range of symmetrical speeds.

REDUNDANT CONNECTION

Customers can use a NetConnect Wireless option as a redundant connection.

NetAccess delivers wireless broadband services using fixed wireless technology built on the Motorola Canopy © platform.

CORPORATE WIRELESS SYMMETRICAL					
		Basic	Business	Corporate	Enterprise
Contract	Install**	1.5Mbps	2.5Mbps	5Mbps	10Mbps
Monthly	\$885.00	\$245.95	\$474.00	\$685.00	\$935.00
1 Year	\$785.00	\$220.95	\$450.00	\$625.00	\$895.00
2 Year	\$685.00	\$199.95	\$385.00	\$585.00	\$825.00
Downstream		1.5Mbps	2.5Mbps	5Mbps	10MMbps
Upstream		1.5Mbps	2.5Mbps	5Mbps	10MMbps
SLA		8HRS	8HRS	4HRS	4HRS

** Add \$1,200 for the installation cost of 10Mbps connection.
All services include a static IP address and 20 email accounts.
Pricing as of June 2009 and subject to change.
